#### Memory

##### Supports unbuffered non-ECC DDR3 SDRAM

The Intel Q43 Express chipset supports unbuffered non-ECC DDR3 SDRAM (synchronous dynamic random access memory) at a frequency of up to 1333MHz.

The Intel Q65 Express chipset supports unbuffered non-ECC DDR3 SDRAM (synchronous dynamic random access memory) at a frequency of up to 1333MHz.

AMD processors support unbuffered non-ECC DDR3 SDRAM (synchronous dynamic random access memory) at a frequency of up to 1333 MHz.

**NOTE:** 1066MHz system memory frequency of operation requires at least PC3-8500 (DDR3-1066) memory type for all populated memory modules, and an Intel processor with FSB (front side bus) of at least 1066MHz.

System Memory upgrades are accomplished by adding DDR3 SDRAM module(s) to empty DIMM slots on the System Board.

**CAUTION:** Voltage is supplied to the memory modules whenever the computer is connected to an active AC outlet. Adding or removing memory modules while voltage is present may cause irreparable damage to the memory modules or system board. The computer must be shut down with the AC power removed (disconnect AC power cord at rear chassis or at AC outlet) prior to adding or removing SDRAM modules.

HP recommends dual-channel symmetric configurations for the best memory performance. For dual-channel symmetric performance, the total amount of memory in each channel must be equal. Do not inter-mix memory module speeds or memory operating frequency will default to lowest speed.

### HP MultiSeat ms6000/ms6005/ms6200 Series Desktop – Standard Features

#### Maximum Memory\*

Supports up to 16GB of un-buffered non-ECC DDR3 SDRAM. Slot 1 is black and must always be populated. Not all possible memory configurations are represented in the table below.

\*For systems configured with more than 3GB of memory and a 32-bit operating system, all memory may not be available to the OS due to system resource requirements. Addressing memory above 4GB requires a 64-bit operating system.

Total Memory	DIMM Slot Population*			
	Channel A		Channel B	
	1 (black)	2 (white)	3 (white)	4 (white)
<b>2 GB</b> (Dual Channel Symmetric)	1GB		1GB	
<b>6 GB</b>	2GB	2GB	2GB	
<b>8 GB</b> (Dual Channel Symmetric)	4GB		4GB	

\* The Intel Q43 Express chipset includes an integrated Management Engine (ME) micro-controller, which requires system memory to support manageability functions. If the system memory configuration is single-channel or dual-channel asymmetric, 16MB of system memory is pre-allocated for the ME at system startup. If the memory configuration is dual-channel symmetric, 32 MB of memory is pre-allocated for the ME at system startup. This pre-allocated memory is not available to the operating system, just as pre-allocated video memory is not available.

\* The HP Compaq 6200 Elite Series supports the 2nd generation Intel® Core™ processor family. Based on a new PC micro-architecture, the processor is designed for a two-chip platform consisting of a processor and Platform Controller Hub (PCH). Unlike previous generations, the processor includes an integrated memory controller (IMC). The IMC supports DDR3 protocols with two independent, 64-bit wide channels each accessing one or two DIMMs.

#### Unit Environment and Operating Conditions

##### General Unit Operating Guidelines

- Keep the computer away from excessive moisture, direct moisture and the extremes of heat and cold, to ensure that unit is operated within the specified operating range.
- Leave a 10.2 cm (4 in) clearance on all vented sides of the computer to permit the required airflow.
- Never restrict airflow into the computer by blocking any vents or air intakes.
- Do not stack computers on top of each other or place computers so near each other that they are subject to each other's re-circulated or preheated air.
- Occasionally clean the air vents on the front, back, and any other vented side of the computer. Lint, dust and other foreign matter can block the vents and limit the airflow.

If the computer is to be operated within a separate enclosure, intake and exhaust ventilation must be provided on the enclosure, and the same operating guidelines listed above will still apply.
